

Aviation Maintenance Technology and Pilot Training VROP Course at Reedley College

This course is open to any High School student who is interested in Aviation. The student need to provide it's own transportation to Reedley College. The Class runs every day from 1:30 to 3:10.

The **Aviation Maintenance Technology Class** designed to teach the theory of operation of aircraft airframes, power plants, and avionics systems and associated maintenance and repair practices. This course will also provide a basic introduction to flight school where students will explore the basics of flight training ground school using flight simulators.

This course will take students through the main objective of the Pilot Ground School:

- Introduction
- Airplane System
- Aerodynamics
- Flight environment
- Meteorology
- Navigation
- Airplane Performance
- Applying Human Factors

This course will prepare students to enter the Reedley College Aviation Maintenance Technology program; Federal Aviation Administration (FAA) approved Technical School.
